

PARROT®

Renault increases its range of CMLTB-enabled vehicles

Paris, France (December 21st, 2006) - Parrot, the market leader for *Bluetooth®* mobile phone devices, is pleased to announce a further development of the latest generation of *Bluetooth* installed hands free kit – the CMLTB* – designed exclusively for Renault, as announced in its press release on October 3rd, 2006.

This installed handsfree kit, offered on an OEM basis on the Renault Mégane since October 2006, is now available on the following models: **Clio III, Scenic II, Laguna II and Espace IV**. From April 2007 onwards, the **Modus, Kangoo generation 2006, Traffic ph.2 and Master ph.3** Renault vehicles will also feature the CMLTB.

Integrated into the vehicle's network architecture, the CMLTB includes several of Parrot's innovative technologies: the signal processing solutions (noise reduction, echo cancellation, etc.), an option to display all the information from the mobile phone directly on the dashboard screen, as well as the "automatic safety call hold" function developed exclusively by Parrot, which makes it possible to put callers on hold, with a recorded message played when drivers are unable to take the call immediately.

*CML TB is French for "Communication Mains-libres Téléphonie *Bluetooth*" which can be translated as "Bluetooth mobile handsfree communication".

About PARROT

Founded in 1994, Parrot has rapidly established itself as a pivotal global player for wireless mobile telephone accessories. Drawing on its tried-and-tested expertise on voice recognition and signal processing technologies, Parrot was one of the very first companies to produce *Bluetooth®*-based wireless hands free car kits, having identified this standard's vast potential as early as 1999. In the first half of 2006, Parrot sold more than 1 million units.

Determined to accompany the mobile telephone's irresistible breakthrough into our day-to-day lives, Parrot has developed two new products in 2006: the Parrot Photo Viewer, an LCD photo frame designed to display photos transmitted from a mobile telephone via *Bluetooth*, and the Parrot Sound System, a wireless hi-fi system with speakers linked up to one another using *Bluetooth*.

Today, Parrot truly has a major international focus: 87% of its sales are generated outside of France, and a large percentage of its production is outsourced to carefully selected partners, enabling it to achieve the best possible level of quality and responsiveness. Parrot is now particularly well positioned to capitalize on the bright future opening up for mobile telephone devices.

Parrot has achieved strong growth in its consolidated revenues, up from 80.9 million euros pro forma in 2005 to 116.4 million euros in the first 9 months of 2006.
