

Parrot® redefines portability with the Parrot MINIKIT

Parrot® is launching a new high-performance portable *Bluetooth*® handsfree kit to accompany you wherever you go: in the car, as well as at the office, at home or even outdoor. A study conducted by an independent laboratory in August on the brand's initiative showed that the Parrot MINIKIT is one of the best performing multifunction handsfree kits on the market.

Practical, stylish and multifunction all-in-one

The Parrot® MINIKIT adapts to all situations, automatically synchronizing its address book with the one of the detected *Bluetooth*® mobile phone. It can pair with up to five phones and record over 1,000 contacts, while its three practical keys ensure intuitive menu access (phonebook, volume, language, etc.). And for even greater safety at the wheel, thanks to the integrated Parrot voice recognition system, it will do whatever you say: simply say the name of the person you want to call, and the Parrot MINIKIT will put you in touch, without you needing to do anything else.

With its integrated 2W speaker and latest-generation DSP-2 signal processing, the Parrot MINIKIT ensures that you can talk and be heard without interference from surrounding noise, enabling crystal clear conversations in any situation.

Free up your communications

With its carefully designed compact format (lightweight design, measuring 110x63x28mm and weighing only 104g), the Parrot MINIKIT can easily be attached to your car's sun visor or slipped into your pocket. Its sleek lines and glossy black design make it a stylish product.

As for all the products in the Parrot range, this incredibly user-friendly handsfree kit integrates the *Bluetooth* v1.2 technology, guaranteeing compatibility with all the *Bluetooth* mobile phones on the market. No upgrades are needed: the Parrot MINIKIT simply updates by itself via *Bluetooth*, ensuring that it keeps pace with the very latest technological developments and remains compatible with all the *Bluetooth* phones available, both now and in the future.

The Parrot MINIKIT is a true portable solution: its back clip means that it can be attached anywhere you want. With its high-endurance battery, the Parrot MINIKIT offers over 10 hours of talk time and one week on standby.

Benchmark highlighting the Parrot MINIKIT's excellent acoustic performance levels

In a comparative review, an independent laboratory tested three of the leading multifunction *Bluetooth* handsfree kits available (detailed review appended). It showed that the Parrot MINIKIT, which led the way in the series of tests performed, stands out as the best-performing speakerphone on the market.

- Voice quality analysis when transmitting calls
Test results: the Parrot MINIKIT offers better listening quality for calls than the other kits tested
- Quality of voice received
Results: the Parrot MINIKIT comes ahead of the other products tested, and is capable of picking up your contact's voice more effectively.

- Echo reduction at maximum volume
Results: here, the Parrot MINIKIT came in joint first, with the two winning kits offering optimum audio quality everywhere.
- Bass intensity at maximum volume.
Once again, the Parrot MINIKIT achieved superior results, despite its compact design, coming in first on echo reduction.

Technical features:

- *Bluetooth*[®] handsfree kit
- Integrated voice recognition software
- 3-button user interface
- 2W hi-fi speaker
- Omnidirectional microphone
- Pairing: up to 5 phones
- Phone pairing: PIN code
- Weight: 104g
- Standby time: over 275 hours
- Recharging time: 3 hours maximum
- Parrot P4+ microprocessor @ 64Mhz
- 16Mbits flash memory
- DSP-2 signal processing algorithms
- Category 2 *Bluetooth*[®]1.2 (10m range)
- *Bluetooth*[®] profile: HSP 1.1, HFP 1.0, OPP

Product advantages: compact and portable multifunction *Bluetooth*[®] handsfree kit
Recommended retail price: €89 (gross)
Commercial release: October 2006
